

Affordable remote well-being monitoring; delivering hospital in the home

Konnect turns the Users own TV into an easy to use video calling and well-being platform; supporting a wide range of core care pathways delivered from the comfort of the Users own home.

Deliver high-quality care outside of hospitals in the Users own home.

Reduce delays in the discharge of care and pressure on hospital capacity.

Avoid unnecessary hospital visits and the resulting cost and time inefficiencies.

Provide increased capacity to treat more people in their own homes.

The Konnect platform supports care pathways and delivery of care and recovery in the home. It is suitable for patients with a range of illnesses and conditions including but not limited to dementia, stroke, loneliness, mental health, post-Covid and COPD.

TV video calling with no training required

Konnect uses the biggest brightest screen in the home - the Users own TV. The simplicity and ease of use for those not comfortable with new technologies mean TV-based healthcare is tech agnostic and has lower costs of adoption with higher user uptake.

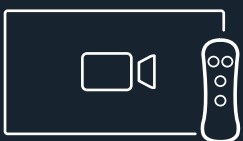

Single analytics and insights dashboard

Remote well-being monitoring and use of AI to set health data parameters if data falls outside of those parameters, including both flags for the health professional and automated alerts for the patient.

Notifications, alerts and reminders

Set medication reminders and create appointment schedules, notifications and alerts.

Personalised video and photo content

Upload health and care videos to support care delivery and recovery in the Users own home.

Out-the-box auto-paired health and well-being sensors

Sleep quality sensor

Digital thermometer

Blood pressure monitor

Oximeter

Weighing scales
